

## TT-30: Tub Temperature Testing Card, Stock Doggy

TT-30-Doggy: front

TT-30-Doggy: back

### HELPFUL HINTS

Each year, thousands of children and adults are burned by tap water. These burns can be prevented.

#### Tap water can scald or burn

- Hot Water Tank's setting should be 120 degrees F.
- Put a small slide-bolt latch on the bathroom door. This will prevent children from entering the bathroom without supervision.

#### In the bath

- The water in a child's bath should **not** be higher than 100.1 degrees F.
- Run cold water into the tub first, then add hot water to reach a safe temperature.
- Fill the tub no higher than the baby's belly button.
- Before placing a child into the bathtub, check the temperature of the water by inserting the BATH THERMOMETER card. The crystal should register **OK** before placing the child into the tub.
- Face the child away from the faucets and keep them closer to the other end of the tub (away from the faucets).

**NOTE: THIS CARD SHOULD ONLY BE USED AS A GUIDE.** It is suggested that you test the water with your elbow as an additional precaution before bathing.

Please remove all guideline indicators before submitting artwork

= Final Cut Size: 2.125" x 3.375"

= Ad Copy Area: 1.875" x .625"  
Art must be within clearances - 0.125" on all sides.
